What is claimed is:

1. A composition comprising a protein having at least 90% sequence identity to wild-type human butyrylcholinesterase, wherein said protein comprises at least one mutation at a position within the acyl binding pocket and at least one mutation adjacent to said acyl bidding pocket.
2. A composition comprising a protein having at least 90% sequence identity to wild-type human butyrylcholinesterase,
3. The composition of claim 2, further comprising a mutation at position 285.
4. A composition comprising a protein having at least 90% sequence identity to wild-type human butyrylcholinesterase, wherein said protein comprises a mutation selected from Y282N, G283H, T284M, and combinations thereof.

wherein said protein comprises a mutation at a position selected from 282, 283, 284, and combinations thereof.
